

14.4 METER CYBER ALUMINIUM CATAMARAN

A 14.4 meters aluminium catamaran by Tim Mumby which designed this performance catamaran with speed and comfort in mind. The design brief was for a large, fast, comfortable charter catamaran, built in aluminium for light weight and strength. Its high speed means you can cover a lot of ground within a short time. This way cruising grounds further away come within your reach, even during shorter charters.

CRUISING CRAFTS

60' RADFORD – CUSTOM – DESIGN – ALUMINIUM ORIGINAL NAME – NINA Q1 NOW NAMED – BLIZZARD

This yacht was built as a commercial charter schooner for sightseeing, cruises, offshore charters, sailing lessons, private parties & moonlight cruises. This is the second yacht built for this owner. The first was a Radford-Adams designed 50' Racing yacht "Valkyrie". The owner is "extremely pleased with the high standards of workmanship which reflects the exceptional ability of HASB owner Greg Brown. Both vessels were delivered on time and on budget."

41' VAN DE STADT – NORMAN - ALUMINIUM SUDDEN IMPULSE

The owner required a yacht he could use to relax and to take his business associates out for a sail. "Sudden Impulse" has given the owner many hours of hassle-free enjoyment, as well as proving its performance capabilities in both off shore and coastal racing.

HARWOOD ALUMINIUM & STEEL BOATS

HASB's capacity in steel and aluminium fabrication enables them to deliver rugged, reliable work boats.

HASB can custom build specialised craft for multipurpose fishing boats, barges, dive boats, ferries, excursion boats, high speed catamarans, charter yachts, research vessels, pilot and patrol boats and tugboats.

From start to finish in their Harwood Island boat yard, all work is personally supervised by Greg Brown, Master Boat Builder.

Marine grade aluminium is often elected as the primary construction material for its durability over fibreglass composite construction and the weight savings over steel construction.

HASB constructs boats that meet or exceed industry standards and customer expectation.
